

Welcome to Interbill's Attorney Billing Software.

You can use Interbill's software from anywhere in the world with access to the Internet. You will need your username and password and soon an authorization via your cell phone if you are using a computer for the first time. You can use Macs, or PCs or any type of tablet. You can also use a phone but currently the phone screens currently need reformatting to be more user friendly. However, in a pinch?

Your data is constantly backed up both on a parallel online system but also offline. We can restore accidentally deleted entries and clients.

Nothing in Interbill is not undoable. You can undo and fix billings and change any entries before or after it is billed. You can go back years and change an entry, transfer an entry and even change billing rates.

The following is an explanation of the workings of each of the six major Interbill functions, **Log** (logging entries); **Clients** (creating, closing and changing client information); **Prebill** (editing logged entries); **Statements** (creating, emailing, editing, undoing statements); - History Statements and Overdue Statements; **Reports**; ; and **Settings** (creating firm wide addresses and options).
