

Local Backup:

Interbill backs up your online database continuously throughout the day. Your data is backed up to a server in the US, one in Europe and one In Eurasia.

In 2023, we created a local backup so you can retain a copy of your own data in a format that is transportable to other systems. It takes about 30 seconds to backup 20 years of data. This local copy provides you with data independence and portability.

You can be reminded once a month to back up your data. You can back up from the reminder by selecting "Local Backup". At any time, you can go to Settings to Log Settings, and Press "Local Backup".

End
